

Red-Eyed Tree Frog

Quick Facts

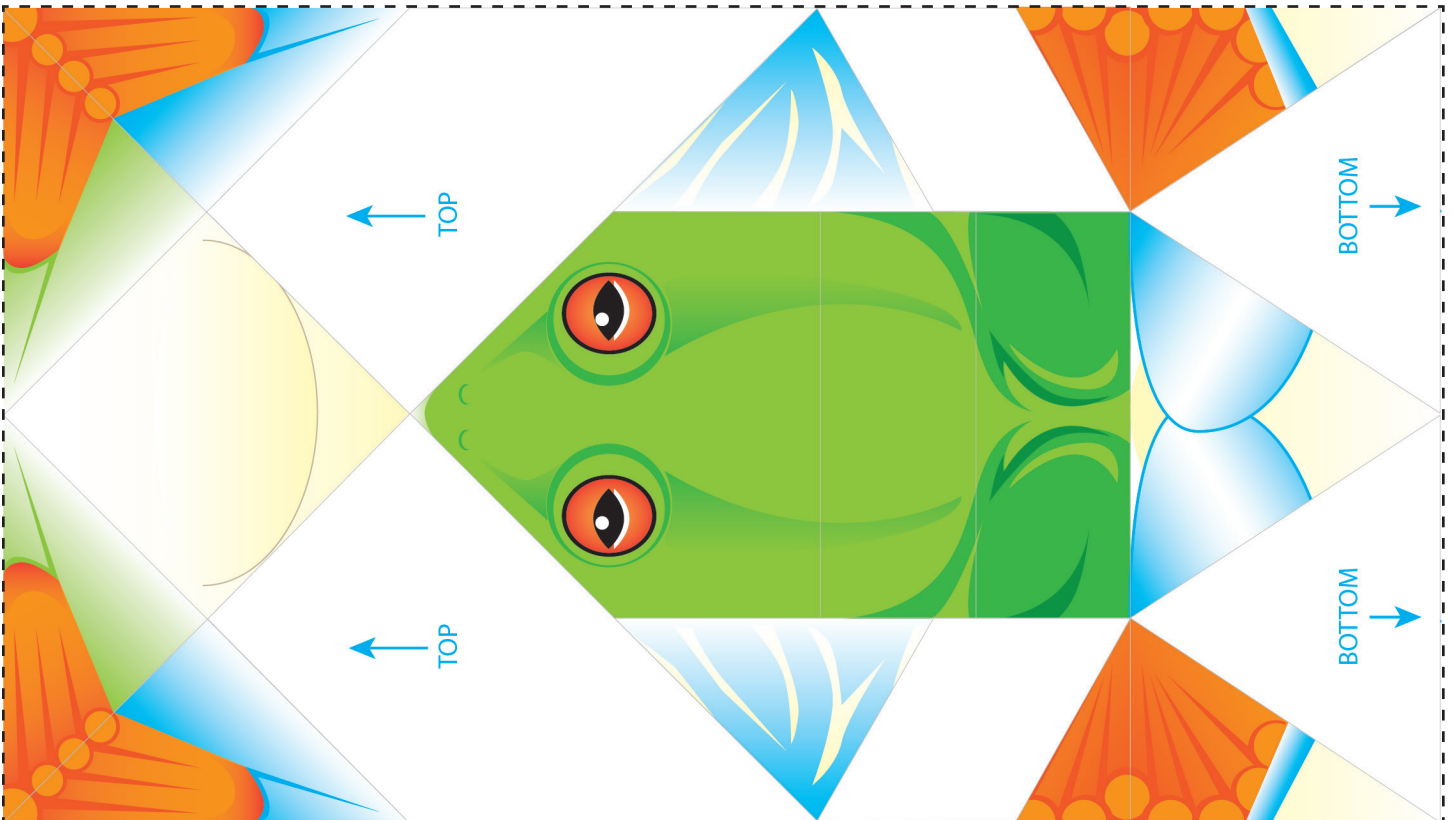

Scientific Name:
Agalychnis callidryas

Group: New Frogs

Family: Tree Frogs
(Hylidae)

Size: 1.5-2.75 in (4-7 cm)

- Lives in lowland tropical rainforests throughout Southern and Central Mexico.
- These frogs are not poisonous and rely on camouflage to protect themselves. During the day, they remain motionless, cover their blue sides with their back legs, tuck their bright feet under their stomach, and shut their red eyes. Thus, they appear almost completely green, and well hidden among the foliage.
